Description

For many paranormal-enthusiasts, it can be challenging to find a cohesive collection of authentic supernatural locations to explore. Get Weird is an application where users can find a compilation of ghost, alien, and other unexplained phenomena landmarks across the country.

Users will be able to search for interesting and mysterious places to visit, as well as, read reviews from other users, and create their own reviews on sites they have explored.

Features

- Users are able to create an account and login, via Google Authentication
- Users can search supernatural sites and save their favorites to their profile
- Users can view supernatural locations on a map of the United States via Google Maps
- Users will be able to rate and review individual sites and add their own supernatural sightings

Planning - User Stories

- Users can log in via Google Authentication
- Users can filter through a database of supernatural sightings based on location and type of supernatural entity
- Users can write and edit reviews on different supernatural locations
- Logged-in users can save locations to a favorites list
- Users can view supernatural sightings on a Google Map

Planning - Database and Models

- SightDbContext
- Entities.csv
- Entity
- AddSightingViewModel
- UserSightFavorite

Technology Stack

- C#
- JavaScript
- ASP.NET MVC
- MySQL
- Visual Studio
- Bootstrap

Demo

What I Learned

- Integrating Identity and using Identity pages
- How to use Google Authentication
- Using Bootstrap for web design

What's Next

- Creating user profile pages
- Displaying random pictures of different supernatural locations
- Dynamic UX on home page
